

Matrix offers comprehensive systems and services to pioneering clinical trials and research in wide ranges of medical area including all medical specialties, dentistry and para-medical.

Our clients make substantial investments in clinical research services that advance products with the potential to improve health and prevent disease. We believe this is important.

Our end goals are our guide as we create and execute a plan to meet your objectives. Efficiency is always on our mind as we help you maneuver through every phase of the complex and evolving drug research and development process.

- In clinical operations, service is coordinating the work of dedicated professionals who monitor product safety, clinical, medical, and regulatory compliance from study start-up through completion
- In clinical data management and biostatistics, we understand that the data must be collected and analyzed in ways that optimize opportunities to make broad labeling claims and true research breakthrough
- In medical writing, regulatory affairs, quality assurance, and data standards, it's about flawless preparation of regulatory applications and submissions and ensuring compliance with good clinical practices

In technology services, we remain diligent in staying current with emerging industry tools and technologies and maintaining an edge in the delivery of solutions to support electronic data capture (EDC), interactive voice response systems (IVRS), data standards, and regulatory requirements
